

Take time to enjoy your lawn!

- ✓ Very fine leaf texture
- ✓ High density
- ✓ Less maintenance to look great than old tall fescue varieties
- ✓ Beautiful, dark green color

Siesta (JF-107) tall fescue

Siesta turf-type tall fescue (Experimental JF-107) *Festuca arundinacea* is Jacklin's newest notably fine-textured, dense, dark green variety.

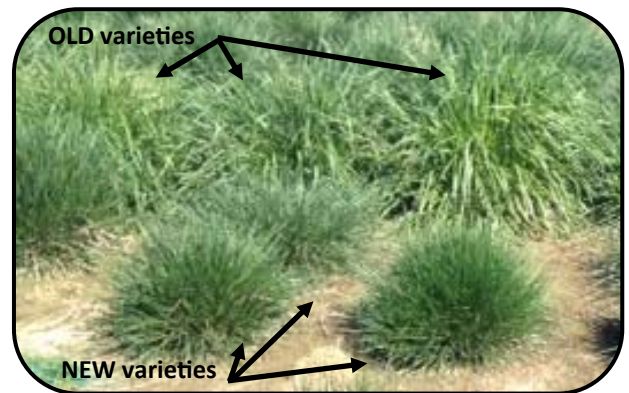

The selected breeding traits of **Siesta** allow you to spend more time enjoying your yard than you would maintaining an old tall fescue variety — and genetically **Siesta** will look and feel much better with less effort. It's **Siesta** time!

HIGH PERFORMANCE TURF: Beautiful dark green color and fine leaf texture produces a high performance turf and **Siesta** is able to thrive under diverse weather conditions.

USES: **Siesta** has a wide range of uses, from golf course roughs to parks and home lawns. For permanent turf it performs best at 1 1/2" to 3" (37 to 75 mm), but is adapted to mowing heights as low as 1/2" (13 mm). **Siesta** performs well alone or in mixtures with Jacklin bluegrasses or fine fescues in temperate and transition zone climates.

SUGGESTED SEEDING RATES:

Plant at 6-10 lbs/1000 ft² (30-50 g/m²) for blends and straights. For sod production, mix 80-90% **Siesta** with 10-20% Jacklin elite Kentucky bluegrass to improve sod strength.

*We've come a long way!
Breeder plots showing old tall fescue varieties in the background with new varieties, like Siesta, in the foreground. Imagine how much less you'll have to do to keep your new tall fescue looking great.*
