

VILLAGE GREEN SEED

GREAT SEED . . . GREAT RESULTS

Features

Excellent winter and summer performance

Low temperature germination/establishment

Mid-dark green colour

Stronger, deeper, denser root mass

High Endophyte

Benefits

Rapid establishment, with fast germinating 4Turf tetraploid.

4 way blend for strong all season sportsfield recovery

Rust and insect resistant

Very attractive, fine leaved.

Good heat and drought tolerance

Seeding rates (bare ground)

30gm-50gm per sqm

3kg-5kg per 100 sqm

300kg-500kg per ha

Tri-Line 4t Turf Ryegrass Blend

Tri-Line 4t is a 4 way blend of 3 high performing dwarf turf type perennial ryegrasses **Reliant II**, **Verve** and **All Star 3** combined with the new technology tetraploid perennial turf ryegrass **4turf**. **Tri-Line 4t** is high endophyte (above 70%).

Tri-Line 4t contains **4turf** tetraploid to act as a nurse grass for cold temperature establishment and excellent winter growth. Tetraploid rye also offers superior drought tolerance.

Tri-Line 4t has good recovery from winter play with all 4 varieties in this blend. The multiple breeding characteristics make this blend a top summer and winter performer along with the fine textured look of US breeding.

Tri-Line 4t is a high endophyte blend offering natural insect resistance, coupled with outstanding rust resistance.

Tri-Line 4t is able to tolerate close mowing due to excellent shoot density and holds up very well in winter sports situations.

Tri-Line 4t consists of **Reliant II**, **Verve**, **All Star 3** and new technology **4turf** tetraploid to provide a complete high performance sports turf. Strong performers in trials, both here and with All Star 3 in the US NTEP trials. **4turf** tetraploid was sown in a field in Gore that historically lost cover in summer. Now it is going into winter with 95% - 100% cover.

Tri-Line 4t is suitable for use in sports fields, golf tees and fairways and parks.
